Contribution Description

UP NUMBER	Description (if not equally counted)	Signature
UP2197433		
UP2199994		
UP2198852		

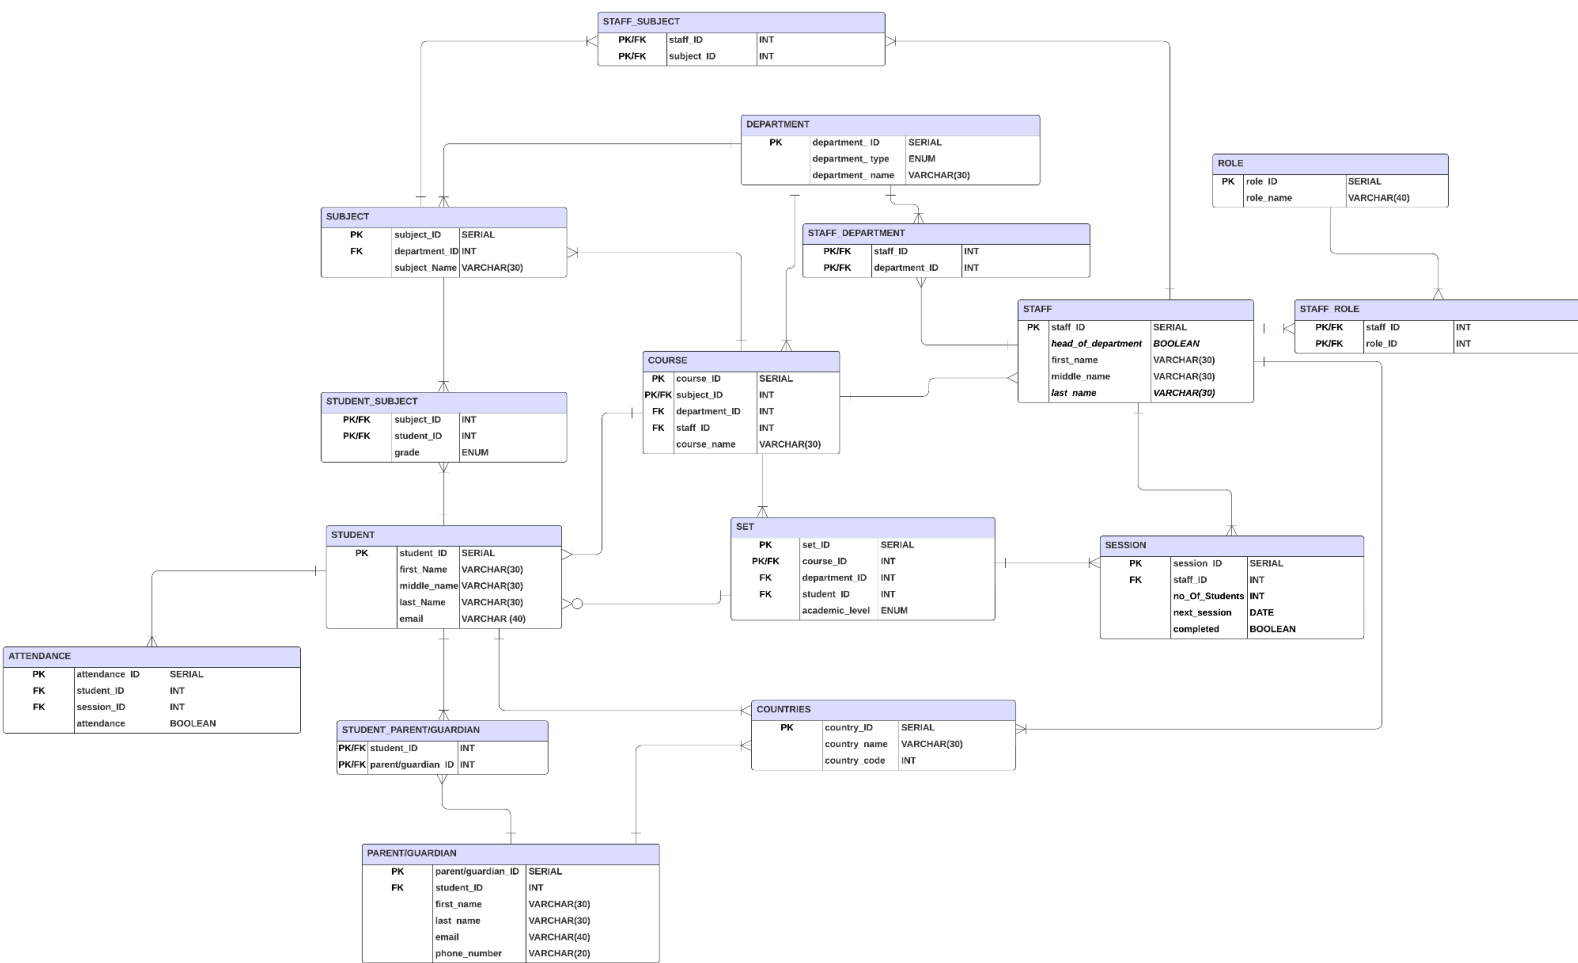

Note¹: The contribution is not necessary only "hands on". The contribution can be as research, brainstorming, tests, diagrams etc. For DOCUMENT WRITING one person should write (to maintain the same writing style and general layout) but all members should contribute with ideas, moderation or research.

Note²: The Percentage Allocation between team members cannot exceed 100%.

Note³: *For submission without Group Contribution Statement (or blank) it will be considered that all members are contributed equally.*

Note⁴: *In case of an EC application only the member applying for EC will receive the extension and NOT ALL GROUP. Ask about EC process.*

Improved Entity-Relationship-Diagram

Improved assumptions

General:

Changes/corrections:

- The connections between each entity, eg;
 - Entities that have '**course_id**' as a foreign key weren't connected to the main entity that has it as a primary key so we fixed that.
- Corrected the 'many to many' relationships.
- Inserted intersection tables between;
 - **Staff** and **Role** (**Role** is a new entity)
 - **Student** and **Parent/Guardian**
 - **Student** and **Subject**
- Deleted the '**GRADE**' table and instead created a grade attribute in the **Student_Subject** entity because it wasn't necessary to have it as an entity of its own.
- Separated link between the **Department** and **Session** entities because **Set** relates more to **Subject/Student**.
- Changed the data types of the foreign keys to, **INT**.
- Deleted the **Headteacher** entity.
- Made a link between **Department** and **Course**.

Department (Mathematics, Computing, Arts, Humanities, HR, Finance):

Changes:

- Removed the '**size**' attribute because the size of a department isn't relevant or accurately measurable in our diagram.
- Made the data type of **department_type**, **ENUM** because there's a specific selection of departments.

Subject (e.g. History and Geography are subjects in the Humanities department):

Changes:

- Linked it to an **intersection table** to remove the '**many-to-many**' link.

Staff:

Changes:

- Removed the '**course_ID**' foreign key as it would result in an error to have '**course ID**' and '**staff ID**' as foreign keys in each others tables.
- Deleted the '**password**' attribute because it wasn't relevant.

Assumptions:

- A staff member only teaches on one course.

Course (e.g. Computer Science is a course that:

Changes:

- Corrected the '**many-to-many**' link.

EXAMPLE

Department
(Technology)

Course
(Computer Science)

Subject
(CCC, DSD,
Programming, ect)

Set
(Set 1, Set 2, Set 3)

Session
Period 2 = Computer
Science: Programming
(Set 2)

Student:

Changes:

- Made the '**middle_name**' attribute '**null**'.
- Deleted '**password**' because it wasn't relevant.

Assumption:

- Not everyone has a middle name.

Parent/Guardian:

Changes:

- Made '**phone_number**' **VARCHAR(20)** because the length of phone numbers vary from country to country.
- Deleted '**password**' because it wasn't relevant.
- Added a primary key.

Assumptions:

- A student may have 2 or more parents or guardians who each want their own parental view. (**one-to-many**)

Set (e.g. set 1 students will be students who have the highest grade average):

Changes:

- Created '**set_ID**'.
- Changed the data type of **academic level** from **INT** to **ENUM** because there's a finite number of sets.

Session:

Changes:

- Corrected the '**many-to-many**' link.

Role (e.g. Head of year, teaching assistant, head teacher):

Changes:

- Was a replacement for the **Headteacher** table.

Assumptions:

- Each teacher will have a specific role within the school.

Countries (e.g. Many students may be international):

Assumptions:

- Students can come from all over the world, as are staff and parents, so they'll need to specify.
 - **Code** because if they need to call a parent from home, they may still be in that country.

INTERSECTION TABLES:

- Staff_Subject
- Student_Parent_Guardian
- Staff_Department
 - One department can have many staff members, one staff member can be in many departments.
- Staff_Role

Data Dictionary

Department

<i>Attribute_Name</i>	<i>KEY</i>	<i>Index</i>	<i>Data Type & Size</i>	<i>Domains & Constraints</i>	<i>FK Reference</i>	<i>Description</i>
